

Customized audio solutions for hotels

**AUDIO SOLUTIONS**

[www.egiaudio.com](http://www.egiaudio.com)

You can find a partner in EGi for:

- Bathroom audio speaker and Bluetooth®/TV volume controller.
- Standalone systems for meeting rooms, gyms or terraces.
- Full standard or IP BGM/PA system.
- Media hubs: connect and charge.
- Multiroom audio for residential / apartments (KNX).
- Assistance systems for guests with disabilities.

## Audio and connectivity for hotels

At EGi we believe that each project must reflect the personality of our customers, this is why our systems are designed to meet all their needs.

Our audio solutions will surprise and delight your guests while they enjoy their stay in your hotel through the music.

EGi provides a complete experience from the lobby to the rooms, where your guests will be able to listen to their music by connecting their smart devices to the installed modules.

Search

# Your room, your music

Your guests can synchronize their devices with the integrated modules and enjoy themselves. No need to worry about the volume, thanks to the possibility to amplify or limit it depending on your needs.

With EGi's Bluetooth® modules, design, customization and usability meet to turn the hotel room into a full multimedia experience.

BLUETOOTH®  
SOLUTIONS

# Bluetooth® / TV volume controller for bathroom audio

Add value to your bathroom allowing your guests to listen to their bedroom TV or their audio content of their own device.

It's a simple solution for the guest entertainment and comfort, made of one amplified volume controller and one to two speakers.

Available in 230V and 12-15V.

Note: in case your TV only has an optical output, please add a converter.

# TV external amplifier for bathroom speaker

Make your bedroom TV sound clearer and louder thanks to EGi small amplifier to be hidden behind the TV or in false ceiling.

This solution will provide a quality sound in the bathroom.

Volume control is done through a rotary knob.

Note: in case your TV only has an optical output, please add a converter.

# Music without limits

We provide an endless range of connectivity possibilities for your guests.

EGi's Bluetooth® control units include HDMI and USB ports to charge any mobile devices while playing movies and sound.

**HBO**

# GRMS (third party) integration.

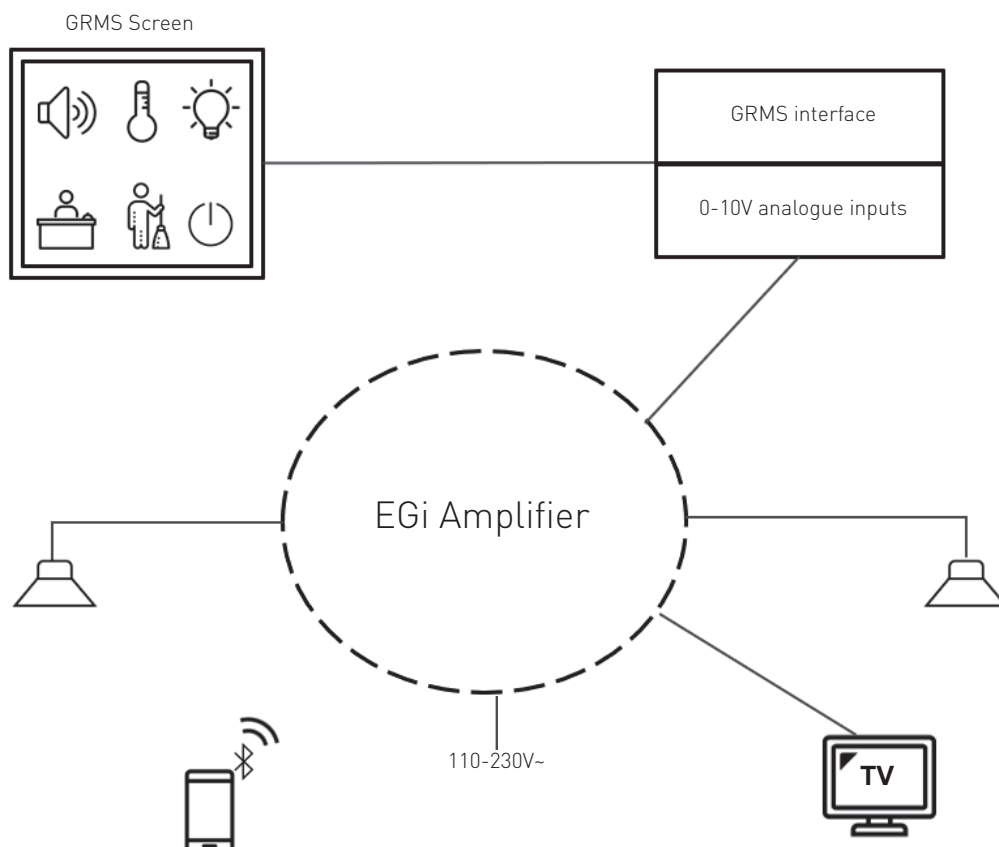

Coming soon.

Audio integration with GRMS is definitely a lack to be filled and which we want to remedy with a remarkable complement to our hospitality range within the end of the year.

Thanks to our worldwide partners, we have defined the main features in order to match hotel needs as much as possible.

Audio sources: Bluetooth® & TV: The TV is hard wired to the speakers via our amplifier, and priority is given to Bluetooth® once paired to a device.

The volume control input (Vvol) is suitable for use with a DC voltage between 0 and 10V.

# ASSISTANCE

## Customization and safety

To achieve the balance between comfort and safety, EGi has a call assistance kit with pull cords, call push-buttons and emergency signals to guarantee the wellbeing of your guests.

The system can work as standalone kits or as a full IP system connected to the main desk.

## Quality sound where it matters most

One of the main services offered by hotels is the use of conference rooms for business and private events.

EGi offers a wide range of speakers that provide a clear and defined sound in any part of the room. It's easy to connect the laptop, tablet or smart-phone with our multimedia modules.
